Executive Summary	23

Part A: GLOBAL ENERGY TRENDS

31

1 Understanding the scenarios 33

Defining the scenarios	34
Non-policy assumptions	36
Economic growth	36
Population	39
Energy prices	40
CO ₂ prices	44
Technology	46

2 Energy trends to 2035 49

Global energy trends by scenario	50
Energy trends in the New Policies Scenario	52
Primary energy demand	52
Energy supply and trade	63
Energy-related CO ₂ emissions	68
Economic implications	69
US developments redefining the global energy map	74
Diverging trends in import dependency	75
The impact of unconventional gas	77
The direction of oil trade and supply security	78

3 Oil market outlook 81

Demand	82
Primary oil demand trends	82
Regional trends	84
Sectoral trends	87
Special topic: heavy freight road transport	91
Supply	97
Reserves and resources	97
Production prospects	101
Trade	119
Investment in oil and gas	120

4 Natural gas market outlook 125

Demand	126
Gas demand trends	126
Regional trends	127
Sectoral trends	132

Production	133
Reserves and resources	133
Gas production prospects	136
Focus on prospects for unconventional gas	141

Trade	146
Inter-regional trade	146
The pricing of internationally traded gas	150

Investment	154
------------	-----

5 Coal market outlook 155

Demand	156
Overview of global demand trends	156
Sectoral trends	159
Regional trends	159
Supply	163
Reserves and resources	163
Overview of global supply trends	164
Regional trends	166
Coal markets and industry trends	174
Developments in international pricing	174
Cost and investment developments	176

6 Power sector outlook 179

Electricity demand	180
Electricity supply	182
Capacity retirements and additions	183
Fossil-fuelled generation	188
Nuclear power	190
Renewables	191
Transmission and distribution	192
Investment	193
CO ₂ emissions	196
Regional trends	197
Focus on electricity prices	202

7 Renewable energy outlook 211

Recent developments	212
Outlook for renewable energy by scenario	214
Outlook by type in the New Policies Scenario	219
Focus on bioenergy	219
Hydropower	225
Wind power	226
Solar photovoltaics	227
Other renewables for electricity and heat	229

Costs of renewables	230
Investment	230
Production costs	231
Subsidies to renewables	233
Integration of variable renewables into the electricity system	236
Benefits of renewables	238
8 Climate change mitigation and the 450 Scenario	241
Introduction	242
Recent developments	242
The world of the 450 Scenario	245
Comparison to other scenarios	245
Primary energy demand and electricity generation in the 450 Scenario	249
Energy-related emissions and abatement	252
Benefits of the 450 Scenario	257
Carbon in energy reserves and energy infrastructure	259
Potential CO ₂ emissions in fossil-fuel reserves	259
Emissions lock-in	261

Part B: FOCUS ON ENERGY EFFICIENCY **267**

9 Energy efficiency: the current state of play	269
Introduction	270
The current status of energy efficiency	271
Existing policies	274
Barriers to energy efficiency deployment	280
The outlook for energy efficiency	282
Trends by region	284
Trends by sector	287
Role in reducing CO ₂ emissions	289
Untapped economically viable potential in the New Policies Scenario	290
Investment in energy efficiency	292
10 A blueprint for an energy-efficient world	297
The Efficient World Scenario	298
Introduction	298
Methodology and assumptions	298
Energy markets in the Efficient World Scenario	302
Trends by fuel	303
Energy intensity	307

Energy prices	307
Energy trade	308
Investment and fuel savings	312
Implications for the global economy	313
Environmental implications	317
Energy-related CO ₂ emissions	317
Local pollution	319
The role of energy efficiency in increasing energy access	321
Building the Efficient World Scenario: a blueprint for savings	322

11 Unlocking energy efficiency at the sectoral level	327
The balance of sectoral opportunities	328
Buildings	330
Techno-economic potential and policy framework	330
Outlook	331
Trends by sub-sector	334
Industry	338
Techno-economic potential and policy framework	338
Outlook	340
Trends by sub-sector	342
Transport	344
Techno-economic potential and policy framework	344
Outlook	346
Trends by sub-sector	349
Power generation and electricity demand	351
Techno-economic potential and policy framework	351
Outlook	352

12 Pathways to energy efficiency	357
What is included in the profiles?	357
How to read the profiles	357
World	360
United States	364
European Union	368
Japan	372
China	376
India	380

Part C: IRAQ ENERGY OUTLOOK

385

13	Iraq today: energy and the economy	387
	Iraq's energy sector	388
	Overview of energy supply	390
	Overview of energy demand	397
	The context for Iraq's energy development	403
	The economy	403
	Legal and institutional framework	405
	Security	411
	Environment and water	412
	Projecting future developments	413
14	Iraq oil and gas resources and supply potential	419
	Oil	420
	Reserves and resources	420
	Production	425
	Crude oil conversion and bringing oil to market	433
	Water requirements	436
	Natural gas	439
	Reserves and resources	439
	Production	440
	Oil and gas investment	445
15	Iraq: fuelling future reconstruction and growth	449
	Overview of energy demand trends	450
	Outlook for the power sector in the Central Scenario	454
	Electricity demand	454
	Electricity generation	456
	Transmission and distribution	462
	Investment in the power sector	463
	Measuring the value of changes in the power sector	464
	Outlook for end-use sectors	466
	Transport	466
	Industry	468
	Buildings and other sectors	470
	Environment	471
	Energy-related emissions	471
	Water use	472
	High Case	473
	Delayed Case	474

16

Implications of Iraq's energy development	477
Energy in Iraq's economic and social development	478
The Central Scenario	478
Economic development in the High and the Delayed Cases	484
Iraq's impact on international oil markets	485
The Central Scenario	486
Iraq's oil market impact in the High and Delayed Cases	489
Iraq's impact on international gas markets	492

Part D: SPECIAL TOPICS

499

17

Water for energy	501
Introduction	502
Facing a more water-constrained future	502
Water for energy linkages	505
Primary energy production	506
Electricity generation	508
The vulnerability of energy to water constraints	512
Outlook for water requirements for energy production	514
Regional stress points	518
China	518
India	521
United States	523
Canada	525
How serious is the water constraint?	527

18

Measuring progress towards energy for all	529
Introduction	530
Global status of modern energy access	532
Outlook for energy access in the New Policies Scenario	535
Access to electricity	535
Access to clean cooking facilities	537
Energy for All Case	538
Energy Development Index	541
Energy development framework	541
Results from the Energy Development Index	544

ANNEXES

549

Annex A. Tables for Scenario Projections	551
Annex B. Policies and measures by scenario	629
Annex C. Definitions	641
Annex D. References	655

List of figures

Part A: GLOBAL ENERGY TRENDS

Figures for Chapter 1: Understanding the scenarios

1.1	Average IEA crude oil price	42
1.2	Ratio of average natural gas and coal prices to crude oil prices in the New Policies Scenario	43

Figures for Chapter 2: Energy trends to 2035

2.1	World primary energy demand by scenario	50
2.2	Global energy-related CO ₂ emissions by scenario	52
2.3	World primary energy demand by fuel in the New Policies Scenario	54
2.4	World primary energy demand per unit of GDP and per capita in the New Policies Scenario in selected regions and countries	55
2.5	Non-OECD primary energy demand by region in the New Policies Scenario	56
2.6	Share of China and India in net increase in global primary energy demand by fuel and CO ₂ emissions in the New Policies Scenario, 2010-2035	57
2.7	OECD primary energy demand by fuel in the New Policies Scenario	60
2.8	The global energy system, 2010	62
2.9	Fossil fuel production in selected regions in the New Policies Scenario, 2010 and 2035	65
2.10	Change in key <i>WEO-2012</i> projections for 2035 compared with <i>WEO-2011</i> in the New Policies Scenario	67
2.11	Energy-related CO ₂ emissions in selected countries and regions in the New Policies Scenario, 2010 and 2035	69
2.12	Economic value of fossil-fuel consumption subsidies by fuel	70
2.13	Economic value of fossil-fuel consumption subsidies by fuel for top 25 countries, 2011	71
2.14	Spending on net imports of fossil fuels in the New Policies Scenario	73
2.15	Net energy self-sufficiency in selected countries and regions in the New Policies Scenario	75
2.16	Net oil and gas import dependency in selected countries in the New Policies Scenario	76
2.17	Reductions in net oil imports in the United States by source in the New Policies Scenario	77
2.18	Share of inter-regional oil and gas trade through key choke points in the New Policies Scenario	79

Figures for Chapter 3: Oil market outlook

3.1	World oil demand and oil price by scenario	82
3.2	Oil demand growth by region in the New Policies Scenario	85
3.3	World oil demand by sector in the New Policies Scenario	88
3.4	World transport oil demand by sub-sector in the New Policies Scenario	89
3.5	Cumulative oil savings from vehicle fuel-economy standards in selected regions, 2010-2035	90

3.6	PLDV fleet in selected regions in the New Policies Scenario	91
3.7	Incremental road freight growth by region since 2000 in the New Policies Scenario	92
3.8	Freight truck sales and stock by region in the New Policies Scenario	93
3.9	World freight truck oil demand in the New Policies Scenario	94
3.10	Alternative fuel use by freight trucks in the New Policies Scenario	95
3.11	Average on-road fuel consumption of heavy freight trucks by region in the New Policies Scenario	97
3.12	Proven oil reserves in the top 15 countries, end-2011	98
3.13	Ultimately technically recoverable resources and cumulative production by region in the New Policies Scenario	99
3.14	Liquid fuels schematic	100
3.15	World oil supply by type in the New Policies Scenario	103
3.16	World oil production by type in the New Policies Scenario	104
3.17	World oil production by quality in the New Policies Scenario	104
3.18	United States oil production by type in the New Policies Scenario	106
3.19	Change in oil production in selected countries in the New Policies Scenario, 2011-2035	114
3.20	World offshore crude oil production by physiographical location and region in the New Policies Scenario	119
3.21	Net oil imports in selected countries and regions in the New Policies Scenario	120
3.22	Worldwide upstream oil and gas investment and the IEA Upstream Investment Cost Index	123

Figures for Chapter 4: Natural gas market outlook

4.1	World natural gas demand by scenario	126
4.2	Natural gas demand in selected regions in the New Policies Scenario	128
4.3	Indicative economics of LNG exports from the United States	130
4.4	World natural gas demand by sector in the New Policies Scenario	132
4.5	Unconventional gas production in leading countries in the New Policies Scenario, 2035	142
4.6	Active drilling rigs in the United States, 2002-2012	143
4.7	Relationship between break-even price (gas price needed to recover well costs) and the liquid content of the gas produced	144
4.8	World unconventional gas production by type and scenario/case	145
4.9	Percentage change in selected economic and energy indicators in the United States, 2006-2011	146
4.10	Net inter-regional natural gas trade flows between major regions in the New Policies Scenario	149
4.11	World short-term LNG trade, 2000-2011	153

Figures for Chapter 5: Coal market outlook

5.1	Share of coal in world primary energy demand by scenario	156
5.2	Incremental world primary energy demand by fuel, 2001-2011	158

5.3	Incremental coal demand in China and the rest of the world by major sector in the New Policies Scenario	161
5.4	Share of key regions in global coal demand in the New Policies Scenario	162
5.5	Share of coal and natural gas in US electricity generation in the New Policies Scenario	163
5.6	World hard coal reserves by country, end-2010	164
5.7	Change in world coal production by type and scenario, 2010-2035	165
5.8	Share of major hard coal importers in global inter-regional trade in the New Policies Scenario	170
5.9	China's hard coal net trade in the New Policies Scenario	171
5.10	United States hard coal net trade in the New Policies Scenario	172
5.11	Australian hard coal exports by type in the New Policies Scenario	174
5.12	Average fortnightly steam coal prices in selected ports	175
5.13	Average FOB supply cash costs and prices for internationally traded steam coal, 2011	177

Figures for Chapter 6: Power sector outlook

6.1	World electricity supply and demand by sector in the New Policies Scenario	181
6.2	Share of electricity generation by source and region in the New Policies Scenario	183
6.3	Power generation gross capacity additions and retirements in the New Policies Scenario, 2012-2035	184
6.4	World net incremental generation and capacity by type in the New Policies Scenario, 2010-2035	185
6.5	Coal-fired power generation by selected region in the New Policies Scenario	188
6.6	Gas-fired electricity generation by region in the New Policies Scenario	189
6.7	Nuclear power capacity by region in the New Policies Scenario	191
6.8	Share of renewables in electricity generation by region in the New Policies Scenario	192
6.9	Power sector cumulative investment by type in the New Policies Scenario, 2012-2035	195
6.10	Annual average investment in T&D infrastructure in the New Policies Scenario	195
6.11	CO ₂ emissions from fossil-fuel combustion in the power sector and emission intensity per unit of electricity generation by selected region in the New Policies Scenario	196
6.12	United States electricity generation by source in the New Policies Scenario	197
6.13	Japan electricity generation by source in the New Policies Scenario	199
6.14	Renewables-based electricity generation by source and share of total generation in the European Union in the New Policies Scenario	200
6.15	Power generating capacity additions by source in China and share of global additions in New Policies Scenario, 2012-2035	201
6.16	Share of oil and gas electricity generation in selected regions in the New Policies Scenario	202
6.17	Components of the end-user price of electricity	203

6.18	Average electricity price to households in selected European countries by cost component, excluding taxes, 2011	203
6.19	Change in end-user prices by type of consumer and selected region in the New Policies Scenario, 2011-2035	204
6.20	Wholesale electricity prices by region and cost component in the New Policies Scenario	207
6.21	Average household electricity prices by region and cost component in the New Policies Scenario	208
6.22	Total cost per capita of residential sector electricity in selected countries, and share of household income spent on electricity	209

Figures for Chapter 7: Renewable energy outlook

7.1	Share of renewables by category and scenario	217
7.2	World average annual renewables-based capacity additions by type in the New Policies Scenario	217
7.3	World bioenergy use by sector and use of traditional biomass in the New Policies Scenario, 2010 and 2035	219
7.4	Share of solid biomass supply for biofuels and power generation by feedstock in the New Policies Scenario	224
7.5	Share of bioenergy demand for biofuels and power generation from domestic production and imports, 2010 and 2035	225
7.6	Installed hydropower capacity in selected regions in the New Policies Scenario	226
7.7	Solar PV gross capacity additions, average unit cost, and resulting investment requirements in the New Policies Scenario	228
7.8	Cumulative investment in renewables-based electricity generation by region and type in the New Policies Scenario, 2012-2035	231
7.9	Indicative biofuels production costs and spot oil prices	232
7.10	Global renewable energy subsidies by source in the New Policies Scenario	234
7.11	Subsidised and unsubsidised renewables-based electricity generation by type in the New Policies Scenario	235
7.12	Global subsidies to renewables-based electricity generation and biofuels by region in the New Policies Scenario	235
7.13	Subsidy lock-in of renewables-based electricity generation in the New Policies Scenario	236
7.14	Installed wind and solar PV capacity and their contribution to system adequacy in the New Policies Scenario	238
7.15	CO ₂ emissions savings from greater use of renewables, relative to 2010 fuel mix in the New Policies Scenario	239

Figures for Chapter 8: Climate change mitigation and the 450 Scenario

8.1	Annual change in global energy-related CO ₂ emissions by fuel and global GDP growth	243
8.2	Energy-related CO ₂ emissions per capita by region, 2011	244
8.3	Global energy-related CO ₂ emissions by scenario	246

8.4	Greenhouse-gas concentration pathways and probability distribution of equilibrium temperature increase above pre-industrial levels	247
8.5	Primary energy demand in the 450 Scenario by fuel	249
8.6	Electricity generation from low-carbon technologies and share by scenario, 2010 and 2035	250
8.7	Global energy-related CO ₂ emissions abatement in the 450 Scenario relative to the New Policies Scenario	253
8.8	Global CO ₂ emissions reduction in the 450 Scenario relative to the New Policies Scenario in global road transport	254
8.9	Per-capita emissions and total emissions by region	255
8.10	Fossil fuel-import bills in selected regions by scenario	258
8.11	Potential CO ₂ emissions from proven fossil-fuel reserves at the end of 2011 by region	260
8.12	Potential CO ₂ emissions from remaining fossil-fuel reserves by fuel type	261
8.13	Energy-related CO ₂ emissions from locked-in infrastructure in 2011 and in the 450 Scenario in OECD countries	262
8.14	Energy-related CO ₂ emissions from locked-in infrastructure in 2011 and in the 450 Scenario in non-OECD countries	263
8.15	Global energy-related CO ₂ emissions in the 450 Scenario and from locked-in infrastructure	265

Part B: FOCUS ON ENERGY EFFICIENCY

Figures for Chapter 9: Energy efficiency: the current state of play

9.1	Global energy intensity average annual growth rates, 1971-2010	272
9.2	Energy intensities by regions, 1980 and 2010	273
9.3	Energy intensity trends by region, 1980-2010	274
9.4	Change in global primary energy demand by measure and by scenario	282
9.5	Savings in primary energy due to energy efficiency in the New Policies Scenario compared with the Current Policies Scenario by region, 2035	286
9.6	Decomposition of the change in final energy consumption in the New Policies Scenario compared with the Current Policies Scenario by sector in 2035	289
9.7	Contribution of change in CO ₂ emissions by policies in the New Policies Scenario compared with the Current Policies Scenario	289
9.8	Trends in energy and CO ₂ intensity by scenario, 2010-2035	290
9.9	Utilised long-term energy efficiency economic potential in the New Policies Scenario, 2011-2035	291
9.10	Average annual increase in energy efficiency investment in the New Policies Scenario compared with the Current Policies Scenario	293
9.11	Average payback periods for energy efficiency measures in the New Policies Scenario by sector including and excluding transaction costs	295
9.12	Investment in energy efficiency by country and region, 2011	296

Figures for Chapter 10: A blueprint for an energy-efficient world

10.1	Representation of energy efficiency by end-use sector in the World Energy Model as considered in the Efficient World Scenario	299
10.2	Efficient World Scenario methodology	301
10.3	World primary energy demand in the Efficient World Scenario by fuel	303
10.4	Reduction in global oil demand in the Efficient World Scenario compared with the New Policies Scenario	304
10.5	Reduction in electricity demand by region in the Efficient World Scenario compared with the New Policies Scenario	305
10.6	Reduction in global coal demand in the Efficient World Scenario compared with the New Policies Scenario	306
10.7	Reduction in global natural gas demand in the Efficient World Scenario compared with the New Policies Scenario	306
10.8	Average annual change in global energy intensity in the Efficient World Scenario	307
10.9	Fuel import bills in selected countries by fuel and scenario	310
10.10	Change in investment across the electricity value chain in the Efficient World Scenario, compared with the New Policies Scenario, 2012-2035	313
10.11	Change in real GDP in the Efficient World Scenario compared with the New Policies Scenario	314
10.12	Changes in value-added by sector and region in the Efficient World Scenario compared with the New Policies Scenario in 2035	315
10.13	Change in global trade flows for selected sectors in the Efficient World Scenario compared with the New Policies Scenario in 2035	317
10.14	Energy-related CO ₂ emissions by scenario and abatement measures	318
10.15	Cumulative efficiency-related CO ₂ emissions savings in the Efficient World Scenario relative to New Policies Scenario by sector and region	318
10.16	Additional electricity needed to achieve energy for all in India compared with savings in the Efficient World Scenario, 2011-2030	321

Figures for Chapter 11: Unlocking energy efficiency at the sectoral level

11.1	Energy savings in 2035 by fuel and sector in the Efficient World Scenario compared to the New Policies Scenario	328
11.2	Savings in residential energy demand in the Efficient World Scenario relative to the New Policies Scenario by contributing factor	334
11.3	Change in energy demand in the residential sector in the Efficient World Scenario and the New Policies Scenario from 2010 to 2035 by end-use	335
11.4	Cumulative new industry capacity as a share of currently installed global capacity in the Efficient World Scenario	338
11.5	Average annual change in industrial activity, efficiency and energy demand by industrial sub-sector and scenario, 2010-2035	341
11.6	Fuel savings in the transport sector in the Efficient World Scenario	347
11.7	Energy savings in the transport sector by region in the Efficient World Scenario relative to the New Policies Scenario	349

11.8	Energy savings in the transport sector in the Efficient World Scenario relative to the New Policies Scenario by sub-sector	349
11.9	Energy savings in road transport in the Efficient World Scenario relative to the New Policies Scenario	350
11.10	Power generation energy savings by measure in the Efficient World Scenario	353
11.11	Coal-fired capacity by technology in the Efficient World Scenario	356

Figures for Chapter 12: Pathways to energy efficiency

12.1a	Global primary energy demand by scenario	360
12.1b	Changes in global real GDP and value-added by sector in the Efficient World Scenario relative to the New Policies Scenario	361
12.1c	Global additional investment by end-use sector in the Efficient World Scenario relative to the New Policies Scenario	361
12.1d	Global change in energy consumption in energy-intensive industries in the Efficient World Scenario, 2010-2035	362
12.1e	Global oil demand savings in the transport sector in the Efficient World Scenario relative to the New Policies Scenario	362
12.1f	Global energy demand and savings in the residential sector in the Efficient World Scenario relative to the New Policies Scenario	362
12.2a	United States primary energy demand by scenario	364
12.2b	United States fossil fuel net trade (current) and import bills in the Efficient World Scenario and the New Policies Scenario	365
12.2c	United States additional investment by end-use sector in the Efficient World Scenario relative to the New Policies Scenario	365
12.2d	United States change in energy consumption in energy-intensive industries in the Efficient World Scenario, 2010-2035	366
12.2e	United States oil demand savings in the transport sector in the Efficient World Scenario relative to the New Policies Scenario	366
12.2f	United States energy demand and savings in the residential sector in the Efficient World Scenario relative to the New Policies Scenario	366
12.3a	European Union primary energy demand by scenario	368
12.3b	European Union fossil fuel net trade (current) and import bills in the Efficient World Scenario and the New Policies Scenario	369
12.3c	European Union additional investment by end-use sector in the Efficient World Scenario relative to the New Policies Scenario	369
12.3d	European Union change in energy consumption in energy-intensive industries in the Efficient World Scenario, 2010-2035	370
12.3e	European Union oil demand savings in the transport sector in the Efficient World Scenario relative to the New Policies Scenario	370
12.3f	European Union energy demand and savings in the residential sector in the Efficient World Scenario relative to the New Policies Scenario	370
12.4a	Japan's primary energy demand by scenario	372
12.4b	Japan's fossil fuel net trade (current) and import bills in the Efficient World Scenario and the New Policies Scenario	373

12.4c	Japan's additional investment by end-use sector in the Efficient World Scenario relative to the New Policies Scenario	373
12.4d	Japan's change in energy consumption in energy-intensive industries in the Efficient World Scenario, 2010-2035	374
12.4e	Japan's oil demand savings in the transport sector in the Efficient World Scenario relative to the New Policies Scenario	374
12.4f	Japan's energy demand and savings in the residential sector in the Efficient World Scenario relative to the New Policies Scenario	374
12.5a	China's primary energy demand by scenario	376
12.5b	China's fossil fuel net trade (current) and import bills in the Efficient World Scenario and the New Policies Scenario	377
12.5c	China's additional investment by end-use sector in the Efficient World Scenario relative to the New Policies Scenario	377
12.5d	China's change in energy consumption in energy-intensive industries in the Efficient World Scenario, 2010-2035	378
12.5e	China's oil demand savings in the transport sector in the Efficient World Scenario relative to the New Policies Scenario	378
12.5f	China's energy demand and savings in the residential sector in the Efficient World Scenario relative to the New Policies Scenario	378
12.6a	India's primary energy demand by scenario	380
12.6b	India's fossil fuel net trade (current) and import bills in the Efficient World Scenario and the New Policies Scenario	381
12.6c	India's additional investment by end-use sector in the Efficient World Scenario relative to the New Policies Scenario	381
12.6d	India's change in energy consumption in energy-intensive industries in the Efficient World Scenario, 2010-2035	382
12.6e	India's oil demand savings in the transport sector in the Efficient World Scenario relative to the New Policies Scenario	382
12.6f	India's energy demand and savings in the residential sector in the Efficient World Scenario relative to the New Policies Scenario	382

Part C: IRAQ ENERGY OUTLOOK

Figures for Chapter 13: Iraq today: energy and the economy

13.1	Iraq hydrocarbon resources and infrastructure	388
13.2	GDP per capita for selected countries, 2011	389
13.3	Hydrocarbon revenue relative to GDP in selected countries, 2011	390
13.4	Iraq oil production	391
13.5	Iraq average daily oil production and transportation, June 2012	392
13.6	Average refinery product slate in Iraq compared to the United States, 2011	394
13.7	Iraq monthly gas production and transportation, June 2012	395
13.8	Iraq crude oil exports by destination market	397
13.9	Primary energy demand per capita in Iraq and the Middle East	397
13.10	Evolution of the energy mix in Iraq and the Middle East	398

13.11	Iraq domestic energy balance, 2010	399
13.12	Iraq difference between gross installed generation capacity and available peak capacity, 2011	400
13.13	Iraq source and reliability of electricity supply by governorate, 2011	402
13.14	Electricity losses by type in selected countries, 2010	403
13.15	Iraq monthly oil export revenues by route	404
13.16	Number of years cover for oil revenues from financial reserves in selected countries, 2011	405
13.17	Iraq main government institutions related to the energy sector	410
13.18	Total number of attacks in Iraq (weekly)	412
13.19	Variations in Iraq's GDP growth by scenario	415

Figures for Chapter 14: Iraq oil and gas resources and supply potential

14.1	Iraq main hydrocarbon basins and fields	421
14.2	Iraq oil reserves by field, end-2011	423
14.3	Iraq production outlook to 2020 in context	427
14.4	Northern Iraq oil and gas fields and infrastructure	431
14.5	Wells by type and rig count required in the Central Scenario	432
14.6	Iraq refinery capacity in the Central Scenario	433
14.7	Southern Iraq oil and gas fields and infrastructure	435
14.8	Reservoir pressure and recovery factors prior to and after the start of water injection at the Rumaila and Kirkuk fields	437
14.9	Net water requirement in southern Iraq oil fields by source in the Central Scenario	438
14.10	Iraq gas production in the Central Scenario	442
14.11	Iraq associated gas processing capacity additions and flaring reduction in the Central Scenario	442
14.12	Iraq non-associated gas production by region in the Central Scenario and High Case	444
14.13	Iraq oil and gas investment in the Central Scenario	446
14.14	Average oil and gas project preparation and completion times in the Middle East	447

Figures for Chapter 15: Iraq: fuelling future reconstruction and growth

15.1	Iraq total primary energy demand by scenario	450
15.2	Iraq total primary energy demand by fuel in the Central Scenario	452
15.3	Total primary energy demand per capita in selected countries in the Central Scenario	453
15.4	Energy intensity in selected countries in the Central Scenario	453
15.5	Iraq total final electricity consumption by sector and estimated unmet electricity demand in the Central Scenario	454
15.6	Iraq net generation capacity available at peak and capacity required to meet peak demand in the Central Scenario	455
15.7	Iraq grid-connected gross generation capacity in the Central Scenario	456
15.8	Expected completion time of selected power plants in Iraq	457

15.9	Iraq electricity generation by fuel and overall efficiency of power generation in the Central Scenario	459
15.10	Levelised cost of base-load plants with international fuel prices in 2020 (Central Scenario) and current domestic fuel prices in Iraq	461
15.11	Iraq annual average investment in power generation capacity and electricity networks in the Central Scenario	463
15.12	Export value of fuel saved in the power sector as a result of changes from 2015	465
15.13	Iraq fossil-fuel consumption subsidies in the Central Scenario	466
15.14	Iraq PLDV ownership and oil demand in transport in the Central Scenario	467
15.15	PLDV ownership and stocks in selected countries in the Central Scenario	468
15.16	Iraq domestic energy balance in the Central Scenario, 2035	469
15.17	Iraq energy-related CO ₂ emissions by fuel and its share of Middle East emissions in the Central Scenario	471
15.18	Carbon intensity in selected countries in the Central Scenario	472
15.19	Iraq water requirements, 2015	473

Figures for Chapter 16: Implications of Iraq's energy development

16.1	Iraq oil and gas export revenues in the Central Scenario	478
16.2	Oil production and export revenue as a share of GDP in selected countries in the Central Scenario, 2011 and 2035	479
16.3	Iraq annual average investment in energy supply infrastructure in the Central Scenario	480
16.4	Iraq labour force and estimated direct oil sector employment in the Central Scenario	481
16.5	Growth in OPEC and non-OPEC supply in the Central Scenario	486
16.6	Major contributors to global oil supply growth to 2035 in the Central Scenario	487
16.7	Iraq oil balance in the Central Scenario	487
16.8	Iraq oil balance in the High Case	490
16.9	Key oil market indicators in 2035 in the Delayed Case, relative to the Central Scenario	492
16.10	Growth in natural gas production in selected countries in the Central Scenario	493
16.11	Iraq gas balance in the Central Scenario	494
16.12	Indicative delivered supply costs and prices for Iraq gas export, 2020	497
16.13	Natural gas production and export in the High Case and the Delayed Case	498

Part D: SPECIAL TOPICS

Figures for Chapter 17: Water for energy

17.1	World water resources and human freshwater use	502
17.2	Renewable water resources per capita in 2010	504
17.3	Water use for primary energy production	507
17.4	Water use for electricity generation by cooling technology	510
17.5	Share of power generation capacity with freshwater once-through cooling and hydro in selected countries, 2010	513

17.6	Global water use for energy production by scenario	514
17.7	Global water use for energy production in the New Policies Scenario by fuel and power generation type	516
17.8	Water intensity of energy production for selected regions in the New Policies Scenario	517
17.9	Renewable water resources per capita and distribution of water-intensive energy production by type in China	518
17.10	Water use for energy production in China in the New Policies Scenario	519
17.11	Renewable water resources per capita and distribution of water-intensive energy production by type in India	522
17.12	Water use for energy production in India in the New Policies Scenario	523
17.13	Water use for energy production in the United States in the New Policies Scenario	524
17.14	Canadian oil sands production and estimated water withdrawal by type in the New Policies Scenario	527

Figures for Chapter 18: Measuring progress towards energy for all

18.1	Countries with the largest population without access to electricity, 2010	533
18.2	Countries with the largest population relying on traditional use of biomass for cooking, 2010	534
18.3	Electricity consumption per capita in selected regions in the New Policies Scenario	537
18.4	Number of people without clean cooking facilities by region in the New Policies Scenario	538
18.5	Average annual investment in modern energy access in selected regions, 2011-2030	539
18.6	Additional impact of the Energy for All Case compared with the New Policies Scenario	540
18.7	Energy development framework	542
18.8	Composition of the new Energy Development Index	543
18.9	Energy Development Index country results, 2010 (and 2002)	545
18.10	Comparison between the new Energy Development Index and the Human Development Index in 2010	547

List of tables

Part A: GLOBAL ENERGY TRENDS

Tables for Chapter 1: Understanding the scenarios

1.1	Definitions and objectives of the <i>WEO-2012</i> scenarios	35
1.2	Real GDP growth assumptions by region	37
1.3	Population assumptions by region	39
1.4	Fossil-fuel import price assumptions by scenario	41
1.5	CO ₂ price assumptions in selected regions and countries by scenario	46

Tables for Chapter 2: Energy trends to 2035

2.1	World primary energy demand and energy-related CO ₂ emissions by scenario	51
2.2	World primary energy demand by fuel in the New Policies Scenario	53
2.3	World primary energy demand by region in the New Policies Scenario	58
2.4	Fossil-fuel reserves and resources by region and type, end-2011	64
2.5	Cumulative investment in energy-supply infrastructure in the New Policies Scenario, 2012-2035	74

Tables for Chapter 3: Oil market outlook

3.1	Oil and total liquids demand by scenario	83
3.2	Oil demand by region in the New Policies Scenario	85
3.3	Remaining technically recoverable oil resources by type and region, end-2011	101
3.4	Oil production and oil and liquids supply by type and scenario	102
3.5	Non-OPEC oil production in the New Policies Scenario	107
3.6	OPEC oil production in the New Policies Scenario	115
3.7	Oil and gas industry investment by company	121
3.8	Cumulative investment in oil and gas supply infrastructure by region in the New Policies Scenario, 2012-2035	124

Tables for Chapter 4: Natural gas market outlook

4.1	Natural gas demand by region and scenario	127
4.2	Natural gas demand by region in the New Policies Scenario	128
4.3	Remaining technically recoverable natural gas resources by type and region, end-2011	134
4.4	Natural gas production by major region and scenario	136
4.5	Natural gas production by region in the New Policies Scenario	138
4.6	Inter-regional natural gas net trade in the New Policies Scenario	147
4.7	LNG export projects under construction worldwide	150

Tables for Chapter 5: Coal market outlook

5.1	Coal demand by region and scenario	157
5.2	World coal demand by sector in the New Policies Scenario	159
5.3	Coal demand by region in the New Policies Scenario	160
5.4	Coal production by type and scenario	165
5.5	World inter-regional hard coal trade by type and scenario	166
5.6	Coal production by region in the New Policies Scenario	168
5.7	Inter-regional hard coal trade in the New Policies Scenario	169
5.8	Selected Indian foreign direct investment in coal supply projects	173

Tables for Chapter 6: Power sector outlook

6.1	Electricity demand by region and scenario	180
6.2	Electricity generation by source and scenario	182
6.3	Cumulative capacity retirements by region and source in the New Policies Scenario, 2012-2035	186
6.4	Cumulative gross capacity additions by region and source in the New Policies Scenario, 2012-2035	187

6.5	Investment in electricity-supply infrastructure by region and source in the New Policies Scenario, 2012-2035	194
Tables for Chapter 7: Renewable energy outlook		
7.1	Total primary demand for renewable energy by region and scenario	215
7.2	World renewable energy use by type and scenario	216
7.3	Renewables-based electricity generation by region in the New Policies Scenario	218
7.4	Ethanol and biodiesel consumption by region in the New Policies Scenario	221
7.5	Installed onshore and offshore wind power capacity by region in the New Policies Scenario	227
Tables for Chapter 8: Climate change mitigation and the 450 Scenario		
8.1	World anthropogenic greenhouse-gas emissions by scenario	246
8.2	Probability of staying below a specified temperature threshold by scenario	247
8.3	Global air pollution by scenario	258
Part B: FOCUS ON ENERGY EFFICIENCY		
Tables for Chapter 9: Energy efficiency: the current state of play		
9.1	Overview of key energy efficiency policies that are currently in place by country/region and sector	276
9.2	Key barriers and remedial policy tools	280
9.3	Key energy efficiency assumptions in major countries/regions in the New Policies and 450 Scenarios	285
9.4	Energy demand and savings due to efficiency measures in the New Policies Scenario compared with the Current Policies Scenario by end-use sector	288
Tables for Chapter 10: A blueprint for an energy-efficient world		
10.1	World primary energy demand in the Efficient World Scenario by fuel	302
10.2	Fossil-fuel import prices in the Efficient World Scenario	308
10.3	Investment in energy efficiency, energy savings and fuel cost savings by end-use sector in the Efficient World Scenario compared with the New Policies Scenario, 2012-2035	312
10.4	Air pollution by region and sector	320
Tables for Chapter 11: Unlocking energy efficiency at the sectoral level		
11.1	Summary of key policies by sector in the Efficient World Scenario	329
11.2	Global buildings energy demand by fuel and energy-related CO ₂ emissions in the Efficient World Scenario	331
11.3	Global industry energy demand by fuel and energy-related CO ₂ emissions in the Efficient World Scenario	341
11.4	Global transport energy demand by fuel and energy-related CO ₂ emissions in the Efficient World Scenario	346
11.5	Installed capacity, fuel consumption and electricity generation in the Efficient World Scenario	355

Tables for Chapter 12: Pathways to energy efficiency		
12.1a	World key indicators	360
12.1b	Global economic and environmental benefits	361
12.1c	World final energy consumption	363
12.2a	United States key indicators	364
12.2b	United States economic and environmental benefits	365
12.2c	United States final energy consumption	367
12.3a	European Union key indicators	368
12.3b	European Union economic and environmental benefits	369
12.3c	European Union final energy consumption	371
12.4a	Japan's key indicators	372
12.4b	Japan's economic and environmental benefits	373
12.4c	Japan's final energy consumption	375
12.5a	China's key indicators	376
12.5b	China's economic and environmental benefits	377
12.5c	China's final energy consumption	379
12.6a	India's key indicators	380
12.6b	India's economic and environmental benefits	381
12.6c	India's final energy consumption	383

Part C: IRAQ ENERGY OUTLOOK

Tables for Chapter 13: Iraq today: energy and the economy

13.1	Contracts awarded by federal authorities for hydrocarbon exploration and development	407
13.2	Growth rates for Iraqi oil output and GDP by scenario	414
13.3	Main assumptions for Iraq in the Central Scenario	417

Tables for Chapter 14: Iraq oil and gas resources and supply potential

14.1	Iraq oil resources by region and super-giant field	422
14.2	Indicative oil development and production costs in selected countries	424
14.3	Iraq oil production by region in the Central Scenario and the High Case	429
14.4	Iraq gas resources by region and super-giant field	440
14.5	Iraq gas production by region in the Central Scenario and the High Case	441

Tables for Chapter 15: Iraq: fuelling future reconstruction and growth

15.1	Iraq primary energy demand by fuel and scenario	451
15.2	Capital costs, efficiency, and construction times for the main types of new generation technologies in Iraq	458
15.3	Iraq key domestic energy indicators by scenario	473

Tables for Chapter 16: Implications of Iraq's energy development

16.1	Key energy export, revenue and investment indicators from the projections for Iraq	484
------	------------------------------------------------------------------------------------	-----

Part D: SPECIAL TOPICS

Tables for Chapter 17: Water for energy

17.1	Key uses of water for energy and potential water quality impacts	505
17.2	Power plant cooling system trade-offs	509
17.3	Examples of water impacts on energy production	513
17.4	Global water use for energy production in the New Policies Scenario by region	515

Tables for Chapter 18: Measuring progress towards energy for all

18.1	People without access to modern energy services by region, 2010	532
18.2	Number of people without access to electricity by region in the New Policies Scenario	535
18.3	Number of people without clean cooking facilities by region in the New Policies Scenario	538

List of boxes

Part A: GLOBAL ENERGY TRENDS

Boxes for Chapter 2: Energy trends to 2035

2.1	How have the New Policies Scenario projections changed since <i>WEO-2011</i> ?	67
-----	--------------------------------------------------------------------------------	----

Boxes for Chapter 3: Oil market outlook

3.1	The economic implications of runaway oil-demand growth in Saudi Arabia	86
3.2	Cars everywhere, but where will they go?	90
3.3	The rise and rise of light tight oil	108
3.4	Arctic waters: the final frontier?	110
3.5	Brazil's oil boom gathers pace	112
3.6	Global oil refining faces a major shake-out	122

Boxes for Chapter 4: Natural gas market outlook

4.1	Gas pricing reform in China	131
4.2	USGS conventional oil and gas resource assessment updated	135
4.3	New finds boost hopes for gas production in East Africa	140
4.4	The economics of producing shale gas at \$2/MBtu	143

Boxes for Chapter 5: Coal market outlook

5.1	Boom in global coal use continues apace	158
5.2	South Africa or southern Africa?	167

Boxes for Chapter 6: Power sector outlook

6.1	Electric vehicles and smart grids	193
6.2	Implications of growing renewables shares for power market design	205

Boxes for Chapter 7: Renewable energy outlook

7.1	Improvements to the World Energy Model: the bioenergy supply and trade module	223
7.2	Hydropower prospects in Africa	226
7.3	Indirect land-use change and the European Union's biofuels policy	240

Boxes for Chapter 8: Climate change mitigation and the 450 Scenario

8.1	Extreme weather events and the energy sector	248
8.2	The relationship between the 450 and Efficient World Scenarios	264

Part B: FOCUS ON ENERGY EFFICIENCY

Boxes for Chapter 9: Energy efficiency: the current state of play

9.1	What are we including when measuring energy efficiency?	270
9.2	Lessons from Japan's energy-saving "Setsuden" campaign	278
9.3	The importance of effective implementation	279
9.4	Decomposing the role of energy efficiency in curbing energy demand	283
9.5	How much money is currently flowing into energy efficiency?	295

Boxes for Chapter 10: A blueprint for an energy-efficient world

10.1	Assessing the impact of the Efficient World Scenario on global economic growth	314
10.2	How large is the rebound effect?	316

Boxes for Chapter 11: Unlocking energy efficiency at the sectoral level

11.1	Determining the cost-effective efficiency potential of appliances in the Efficient World Scenario	337
11.2	Types of energy efficiency improvements in industry	339
11.3	Modal shift and behavioural change in transport energy efficiency	348
11.4	The value of smart grids	353
11.5	The potential of combined heat and power	354

Part C: IRAQ ENERGY OUTLOOK

Boxes for Chapter 13: Iraq today: energy and the economy

13.1	Breaking through the historical ceiling on Iraq's oil supply	391
13.2	Technical service contracts and production-sharing contracts	406
13.3	Iraq energy data	411
13.4	Overview of the Iraq Central Scenario and cases	414
13.5	Strategic thinking for Iraq's energy sector	416

Boxes for Chapter 14: Iraq oil and gas resources and supply potential

14.1	Outlook for oil production in the KRG area	430
14.2	The Strategic Pipeline	436
14.3	Basrah Gas Company	443

Boxes for Chapter 15: Iraq: fuelling future reconstruction and growth

15.1	Iraq near-term surge in power provision	457
15.2	The role of renewables in Iraq	460
15.3	Reforming the power sector	464

Boxes for Chapter 16: Implications of Iraq's energy development

16.1	Gaining local benefits from Iraq's energy investment boom	483
16.2	Crude quality and marketing options	488

Part D: SPECIAL TOPICS

Boxes for Chapter 17: Water for energy

17.1	Energy for water	504
17.2	Water requirements for concentrating solar power	511

Boxes for Chapter 18: Measuring progress towards energy for all

18.1	Brazil's Luz Para Todos ("Light for All") programme	536
18.2	Areas for potential further development of the EDI	543
18.3	Africa: resource rich but modern energy poor	546

List of spotlights

Part A: GLOBAL ENERGY TRENDS

What is the biggest source of uncertainty for energy prospects?	38
Are we on track to achieve the targets in the UN Sustainable Energy for All initiative?	59
Are we finding enough crude oil to sustain production?	105
Where will cheap American gas end up?	129
Beyond the solar PV bubble	229
What is the role of rare earths in climate change mitigation?	251

Part B: FOCUS ON ENERGY EFFICIENCY

Do energy efficiency measures "undermine" carbon markets?	292
Will improved energy efficiency be good for the oil-exporting countries?	311

Part C: IRAQ ENERGY OUTLOOK

What is the potential cost of maintaining fossil-fuel subsidies in Iraq?	465
Why invest in spare oil production capacity?	491

Part D: SPECIAL TOPICS

What is the potential impact of new energy access commitments?	531
----------------------------------------------------------------	-----
