# SAFER DRINKING WATER FOR ALL EUROPEANS

#DrinkingWaterEU

*“Our children deserve a Europe that preserves their way of life. They deserve a Europe that empowers them. They deserve a Europe that protects.”*

European Commission President Juncker, State of the Union Address, 14 September 2016

Most people living in the EU enjoy very good access to high quality drinking water. Almost 100% of drinking water, provided by major suppliers, is safe to drink across the EU. This is in large part thanks to European environmental legislation, supported by EU funding.

EU cohesion policy will invest **€14.8 billion** in the water sector between **2014-2020**, providing an additional **12 million people** with improved water supply. This is on top of 6 million people who already benefited from better water supply between **2007-2013**.

Only 20% of Europeans found drinking water outside of their home country acceptable.

## NEW EU RULES ON DRINKING WATER

- Improve access to water for all
- Upgrade drinking water standards
- Increase transparency to empower consumers

Better quality and transparency will make tap water safer. Confidence in tap water would be improved. This will be good for European citizens' health, their wallet and the planet.

## INTRODUCING EVEN BETTER QUALITY STANDARDS:

Potential health risks will decrease from 4% to below 1% on EU average

### THE PRICE WE PAY

Tap water costs about € 0.002 per litre.

Compare that to what you pay for bottled water!

Lower consumption of bottled water can help households in Europe **save more than €600 million per year.**

## TRANSPARENCY:

Consumers will find detailed information on their water bill:

NOW	NEW RULES			
	<table><tr><td>Price of water per litre and m<sup>3</sup></td></tr><tr><td>Volume consumed</td></tr><tr><td>Yearly consumption trend</td></tr></table>	Price of water per litre and m <sup>3</sup>	Volume consumed	Yearly consumption trend
Price of water per litre and m <sup>3</sup>				
Volume consumed				
Yearly consumption trend				

## ACCESS:

The new rules will require Member States to **improve access for all, especially for vulnerable and marginalised groups** who currently have no access to drinking water.

## REDUCE RED TAPE:

The new proposal abolishes the outdated triannual reporting requirements and focuses on essential information.

For example, it allows supplies to focus on treating substances that are known to be in their area, instead of wasting resources to go through a long list of generic substances that are not present in their area.

**With this proposal, the Commission makes a tangible contribution to commitments made under:**

-  **The 'Right2Water' European Citizens' Initiative**, signed by 1.6 million European citizens
-  **The European Pillar of Social Rights**: the right to access essential services of good quality, including water
-  **The 2030 Sustainable Development Goals** (Goal 6): Access to clean water and sanitation
-  **The EU Plastics Strategy**: Better quality water is expected to reduce bottled water consumption by 17%
-  **The Paris Agreement** objectives on climate change: Reducing the consumption of bottled water, estimated to go down from 100 to 88 litres per year by 2050, can reduce greenhouse gas emissions by 1.2 million tonnes CO<sub>2</sub>.
